

Instructions to Candidates

You are required to design and develop a Todo Web Application using Frontend – Next.js/Backend-Laravel/Database - PostgreSQL.

Functional Requirements

1. Authentication Module

Implement:

- User Registration
- User Login
- Logout
- Protected routes/APIs
- Password hashing

Requirements

- Secure authentication mechanism
- Validation handling
- Proper error responses
- Modern responsive UI using **bootstrap or tailwind**

2. Todo Management Module

Authenticated users must be able to:

- Create todos
- Edit todos
- Delete todos
- Mark todos as completed
- Mark todos as pending
- Search todos
- Filter todos

No limitations. Please push the code to github repository then share once you done.
